

Bond Firmly. Remove Cleanly. Zero Residues.

Residue-Free Removal

Clean, complete release from substrates of the closed side of the tape even after extended bonding periods – for processes and surfaces where residues are not acceptable.

High Initial Tack

Strong, immediate adhesion on the open side for reliable hold from first contact throughout the entire bonding period.

Asymmetric Design

Two deliberately different adhesive systems on one PET carrier – each optimized for its specific function: hold or release.

Broad Application Range

From temporary floor protection to cork lamination to protective pads in the window industry – one tape for diverse temporary bonding needs.

Bond Firmly. Remove Cleanly. Zero Residues.
Setting new standards in temporary bonding - the versatile solution for applications where strong adhesion and clean removal are both non-negotiable.

DuploCOLL® 59330

Asymmetric tape for strong temporary bonding and residue-free removal
